## 01 the platform

vrs_01

| | |
|---|---|
| 1–7 | seven knobs, each with its own cv jack · 0–5 v · the knob is an offset |
| abc xyz | two 3-way switches · positions read left / middle / right |
| fsu | button + gate jack (high above about 2 v) · each firmware names it: tap, hit, gate… |
| in 1 in 2 | stereo in · in 1 is normalled to in 2 (mono in = both) |
| out 1 out 2 | stereo out |
| LEDs | 4 rgb lights · at boot their colours identify the firmware |
| size | 10 hp · 25 mm deep · 125 mA +12 v · 10 mA –12 v |

## 02 swapping firmware

vrs_02

you need — a micro usb **data** cable, and chrome, edge or opera on a computer or android device

1. turn off the power to your case and unscrew the versio
2. unplug the power cable from the back of the module
3. plug the micro usb cable into the module and your computer
4. open the noise engineering firmware swap page, choose versio and a firmware, follow its instructions (free, about a minute)
5. unplug usb, reconnect power, screw the module back in

firefox and safari can't talk to the module · charge-only cables won't connect · windows may need a one-time zadig driver

**community firmware** — a .bin from the developer

| | |
|---|---|
| most | same swap page: choose custom file · to go back, pick any noise engineering firmware |
| some | need the daisy web programmer, and the daisy bootloader (v6.4) installed first |
| dfu mode | hold the board's boot button, tap reset, let go (cithara: hold 1, tap 2) |
