one world. many minds. · every control below is named by its number on the numbered panel · firmware prices as listed by each developer, 2026.10 · every noise engineering firmware is free to swap · pink = hold

01 the platform

vrs_01

1–7	seven knobs, each with its own cv jack · 0–5 v · the knob is an offset
abc · xyz	two 3-way switches · positions read left / middle / right
fsu	button + gate jack (high above about 2 v) · each firmware names it: tap, hit, gate…
in 1 · in 2	stereo in · in 1 is normalled to in 2 (mono in = both)
out 1 · out 2	stereo out
LEDs	4 rgb lights · at boot their colours identify the firmware
size	10 hp · 25 mm deep · 125 mA +12 v · 10 mA −12 v

02 swapping firmware

vrs_02

you need	a micro usb **data** cable, and chrome, edge or opera on a computer or android device

1. turn off the power to your case and unscrew the versio
2. unplug the power cable from the back of the module
3. plug the micro usb cable into the module and your computer
4. open the noise engineering firmware swap page, choose versio and a firmware, follow its instructions (free, about a minute)
5. unplug usb, reconnect power, screw the module back in

firefox and safari can't talk to the module · charge-only cables won't connect · windows may need a one-time zadig driver

community firmware — a .bin from the developer

most	same swap page: choose custom file · to go back, pick any noise engineering firmware
some	need the daisy web programmer, and the daisy bootloader (v6.4) installed first
dfu mode	hold the board's boot button, tap reset, let go (cithara: hold 1, tap 2)
